# UNDERSTANDING THE NEW ISO 31030 BENCHMARK

# Is your Travel Risk Management programme still fit for purpose in this COVID-19 world?

**INTERNATIONAL SOS**

**START**

**Does your organisation have an understanding of its travel risk appetite?** ✗

→ It's important to **understand potential vulnerabilities** so your organisation can adopt behaviours to mitigate them

**Have you reviewed your travel risk policy in line with this 'new normal' travel environment?** ✗

→ It's key that policies now address the compound risks due to the pandemic. Our case complexity has increased by **43%** since the start of the pandemic

**Do you have a travel risk assessment and treatment process that covers security/health/safety hazards?** ✗

→ It's imperative organisations have a **holistic understanding of risks and how to reduce them**, whether through traveller education, restrictions or pre-authorisation programmes

**Are all stakeholders aligned on your incident management process?** ✗

→ How do you know your people are safe during a crisis? Who are your emergency contact points? A **clear incident management process** should address this

**Do you have an effective programme monitoring and review process in place?** ✗

→ How can you **demonstrate ROI to the board** without oversight of benchmarking data or programme metrics?

**These are all the basic components of a ISO 31030:2021 standard TRM programme.
